## **AUTOMATED CONTENT PUBLISHING**

- 3 Methods and systems of operating a computer system are provided. An example
- 4 embodiment of the computer system comprises at least one content provider which is
- 5 coupled to a portal which may also be coupled to a user. An example embodiment of the
- 6 method comprises the following steps: the content provider offers a new content to the
- 7 portal, the portal compares credentials of the content provider with stored credentials of
- 8 registered content providers, and the portal accepts or rejects the content provider.
- Generally, the portal checks new content and accepts or rejects the new content.
